Package: Rsymphony (via r-universe)

August 27, 2024

Version 0.1-33			
Title SYMPHONY in R Description An R interface to the SYMPHONY solver for mixed-integer linear programs.			
			License EPL Depends R (>= 2.6.0)
Enhances slam, Matrix, SparseM			
SystemRequirements SYMPHONY libraries and headers

Description

High level R interface to the COIN-OR SYMPHONY solver for linear as well as mixed integer linear programming problems (MILPs).

Usage

Arguments

mat a vector or a matrix of the constraint coefficients dir a character vector with the directions of the constraints. Each element must be one of "<="", "==" or ">="". rhs the right hand side of the constraints bounds NULL (default) or a list with elements upper and lower containing the indices and corresponding bounds of the objective variables. The default for each variable is a bound between 0 and Inf. types a character vector giving the types of the objective variables, with "C", "I", and "B" corresponding to continuous, integer, and binary, respectively, or NULL (default), taken as all-continuous. Recycled as needed. max a logical giving the direction of the optimization. TRUE means that the objective is to maximize the objective function, FALSE (default) means no output. time_limit an integer defining the level of verbosity, -2 (default) means no output. time_limit an integer defining the limit in seconds, -1 (default) means no time limit. node_limit when the gap between the lower and the upper bound reaches this point, the solution process will stop and the best solution found to that point will be returned, -1 (default) means no gap limit. first_feasible a logical defining if the solution process should stop after the first feasible solution has been found, FALSE (default) means no LP file is written. write_lp a logical value indicating if an MPS representation of the problem should be written for debugging purposes, FALSE (default) means no MPS file is written.

	write_mps	

Details

SYMPHONY is an open source solver for solving mixed integer linear programs (MILPs). The current version can be found at https://projects.coin-or.org/SYMPHONY. Package **Rsymphony** uses the C interface of the callable library provided by SYMPHONY, and supplies a high level solver function in R using the low level C interface.

Value

A list containing the optimal solution, with the following components.

solution the vector of optimal coefficients

objval the value of the objective function at the optimum

status an integer with status information about the solution returned: 0 if the optimal solution was found, a non-zero value otherwise.

Author(s)

Reinhard Harter, Kurt Hornik and Stefan Theussl

Examples

```
## Simple linear program.
## maximize: 2 x_1 + 4 x_2 + 3 x_3
## subject to: 3 x_1 + 4 x_2 + 2 x_3 \le 60
              2 x_1 + x_2 + x_3 <= 40
                 x_1 + 3 x_2 + 2 x_3 \le 80
                 x_1, x_2, x_3 are non-negative real numbers
obj <- c(2, 4, 3)
mat <- matrix(c(3, 2, 1, 4, 1, 3, 2, 1, 2), nrow = 3)
dir <- c("<=", "<=", "<=")
rhs <- c(60, 40, 80)
max <- TRUE
Rsymphony_solve_LP(obj, mat, dir, rhs, max = max)
## Simple mixed integer linear program.
## maximize: 3 x_1 + 1 x_2 + 3 x_3
## subject to: -1 x_1 + 2 x_2 + x_3 \le 4
                        4 x_2 - 3 x_3 <= 2
##
##
                  x_1 - 3 x_2 + 2 x_3 \le 3
##
                  x_1, x_3 are non-negative integers
                  x_2 is a non-negative real number
##
