

Package: tramnet (via r-universe)

September 4, 2024

Title Penalized Transformation Models

Version 0.1-0

Date 2024-03-20

URL <http://ctm.R-forge.R-project.org>

Description Partially penalized versions of specific transformation models implemented in package 'mlt'. Available models include a fully parametric version of the Cox model, other parametric survival models (Weibull, etc.), models for binary and ordered categorical variables, normal and transformed-normal (Box-Cox type) linear models, and continuous outcome logistic regression. Hyperparameter tuning is facilitated through model-based optimization functionalities from package 'mlr3MBO'. The methodology is described in Kook et al. (2021) <[doi:10.32614/RJ-2021-054](https://doi.org/10.32614/RJ-2021-054)>. Transformation models and model-based optimization are described in Hothorn et al. (2019) <[doi:10.1111/sjos.12291](https://doi.org/10.1111/sjos.12291)> and Bischi et al. (2016) <[arxiv:1703.03373](https://arxiv.org/abs/1703.03373)>, respectively.

Depends R (>= 4.0.0), tram (>= 1.0-0), CVXR (>= 1.0-0)

Imports mlt, basefun, sandwich, stats, paradox, mlr3mbo, bbotk

Suggests penalized, TH.data, survival, testthat (>= 3.0.0)

License GPL-2

RoxygenNote 7.3.1

`cv1_tramnet` *Cross-validating tramnet models*

Description

k-fold cross validation for "tramnet" objects over a grid of the tuning parameters based on out-of-sample log-likelihood.

Usage

```
cv1_tramnet(
  object,
  fold = 2,
  lambda = 0,
  alpha = 0,
  folds = NULL,
  fit_opt = FALSE
)
```

Arguments

<code>object</code>	Object of class "tramnet".
<code>fold</code>	Number of folds for cross validation.
<code>lambda</code>	Values for lambda to iterate over.
<code>alpha</code>	Values for alpha to iterate over.
<code>folds</code>	Manually specify folds for comparison with other methods.
<code>fit_opt</code>	If TRUE, returns the full model evaluated at optimal hyper-parameters

Value

Returns out-of-sample logLik and coefficient estimates for corresponding folds and values of the hyper-parameters as an object of class "cv1_tramnet"

Examples

```
set.seed(241068)
if (require("survival") & require("TH.data")) {
  data("GBSG2", package = "TH.data")
  X <- 1 * matrix(GBSG2$horTh == "yes", ncol = 1)
  colnames(X) <- "horThyes"
  GBSG2$surv <- with(GBSG2, Surv(time, cens))
  m <- Coxph(surv ~ 1, data = GBSG2, log_first = TRUE)
  mt <- tramnet(model = m, x = X, lambda = 0, alpha = 0)
  mc <- Coxph(surv ~ horTh, data = GBSG2)
  cvl_tramnet(mt, fold = 2, lambda = c(0, 1), alpha = c(0, 1))
}
```

LmNET

Regularized transformation model classes

Description

Regularized transformation model classes

Usage

```
LmNET(
  formula,
  data,
  lambda = 0,
  alpha = 1,
  tram_args = NULL,
  constraints = NULL,
  ...
)

BoxCoxNET(
  formula,
  data,
  lambda = 0,
  alpha = 1,
  tram_args = NULL,
  constraints = NULL,
  ...
)

ColrNET(
  formula,
  data,
```

```
lambda = 0,  
alpha = 1,  
tram_args = NULL,  
constraints = NULL,  
...  
)  
  
SurvregNET(  
  formula,  
  data,  
  lambda = 0,  
  alpha = 1,  
  tram_args = NULL,  
  constraints = NULL,  
  ...  
)  
  
CoxphNET(  
  formula,  
  data,  
  lambda = 0,  
  alpha = 1,  
  tram_args = NULL,  
  constraints = NULL,  
  ...  
)  
  
LehmannNET(  
  formula,  
  data,  
  lambda = 0,  
  alpha = 1,  
  tram_args = NULL,  
  constraints = NULL,  
  ...  
)  
  
PolrNET(  
  formula,  
  data,  
  lambda = 0,  
  alpha = 1,  
  tram_args = NULL,  
  constraints = NULL,  
  ...  
)
```

Arguments

formula	Formula specifying the regression. See tram .
data	Object of class "data.frame" containing the variables referred to in the formula model.
lambda	A positive penalty parameter for the whole penalty function.
alpha	A mixing parameter (between zero and one) defining the fraction between lasso and ridge penalties, where alpha = 1 corresponds to a pure lasso and alpha = 0 to a pure ridge penalty.
tram_args	Additional arguments (besides model and data) passed to tram_fun .
constraints	An optional list containing a matrix of linear inequality constraints on the regression coefficients and a vector specifying the rhs of the inequality.
...	Additional arguments passed to solve .

Value

Object of class "tramnet".

logLik.tramnet *S3 methods for class "tramnet"*

Description

S3 methods for class "tramnet"

Usage

```
## S3 method for class 'tramnet'
logLik(
  object,
  parm = coef(object, tol = 0, with_baseline = TRUE),
  w = NULL,
  newdata = NULL,
  add_penalty = FALSE,
  ...
)

## S3 method for class 'tramnet'
coef(object, with_baseline = FALSE, tol = 1e-06, ...)

## S3 method for class 'tramnet_Lm'
coef(object, with_baseline = FALSE, tol = 1e-06, as.lm = FALSE, ...)

## S3 method for class 'tramnet'
predict(object, newdata = NULL, ...)
```

```

## S3 method for class 'tramnet'
simulate(object, nsim = 1, seed = NULL, newdata = NULL, bysim = TRUE, ...)

## S3 method for class 'tramnet'
estfun(
  x,
  parm = coef(x, with_baseline = TRUE, tol = 0),
  w = NULL,
  newdata = NULL,
  ...
)

## S3 method for class 'tramnet'
residuals(
  object,
  parm = coef(object, tol = 0, with_baseline = TRUE),
  w = NULL,
  newdata = NULL,
  ...
)

## S3 method for class 'tramnet'
print(x, ...)

## S3 method for class 'tramnet'
summary(object, ...)

## S3 method for class 'summary.tramnet'
print(x, digits = max(3L, getOption("digits")) - 3L), ...)

```

Arguments

<code>object</code>	Object of class "tramnet".
<code>parm</code>	Parameters to evaluate the log likelihood at.
<code>w</code>	Optional vector of sample weights.
<code>newdata</code>	Data to evaluate the log likelihood at.
<code>add_penalty</code>	Whethr or not to return the penalized log-likelihood (default <code>add_penalty = FALSE</code>).
<code>...</code>	Ignored.
<code>with_baseline</code>	If TRUE, also prints coefficients for the baseline transformation.
<code>tol</code>	Tolerance when an estimate should be considered 0 and not returned (default <code>tol = 1e-6</code>).
<code>as.lm</code>	See coef.mlt
<code>nsim</code>	Number of simulations, see simulate.mlt .
<code>seed</code>	Random seed, see simulate.mlt .
<code>bysim</code>	Return by simulation, see simulate.mlt .

`x` Object of class "tramnet".
`digits` Number of digits to print.

Value

Returns (potentially weighted w) log-likelihood based on object evaluated at parameters `parm` and data `newdata`
 Numeric vector containing the model shift parameter estimates
 Numeric vector containing the linear model shift parameter estimates
 Vector of predictions based on object evaluated at each row of `newdata`
 Returns a list of `data.frames` containing parametric bootstrap samples of the response based on the data supplied in `newdata`
 Matrix of score contributions w.r.t. model parameters evaluated at `parm`
 Returns a numeric vector of residuals for each row in `newdata`
 Object of class "summary.tramnet".
 Object of class "summary.tramnet".
 Invisible `x`.

`mbo_recommended`

Fit recommended regularized tram based on model based optimization output

Description

Extracts the "optimal" tuning parameters from the output of `mbo_tramnet` and fits the corresponding `tramnet` model.

Usage

```
mbo_recommended(mbo_obj, m0, x, ...)
```

Arguments

`mbo_obj` Object returned by `mbo_tramnet`.
`m0` Null model of class "tram", see `tramnet.tram`.
`x` Design matrix, see `tramnet.tram`.
`...` Additional arguments to `tramnet`.

Value

Object of class "tramnet".

Description

Uses model based optimization to find the optimal tuning parameter(s) in a regularized transformation model based on cross-validated log-likelihoods. Here the 'tramnet' package makes use of the 'mlr3mbo' interface for Bayesian Optimization in machine learning problems to maximize the cv-logLik as a black-box function of the tuning parameters alpha and lambda.

Usage

```
mbo_tramnet(
  object,
  fold = 2,
  n_iter = 5,
  minlambda = 0,
  maxlambda = 16,
  minalpha = 0,
  maxalpha = 1,
  folds = NULL,
  noisy = FALSE,
  obj_type = c("lasso", "ridge", "elnet"),
  verbose = TRUE,
  ...
)
```

Arguments

<code>object</code>	Object of class "tramnet".
<code>fold</code>	Number of cross validation folds.
<code>n_iter</code>	Maximum number of iterations in model-based optimization routine.
<code>minlambda</code>	Minimum value for lambda (default <code>minlambda</code> = 0).
<code>maxlambda</code>	Maximum value for lambda (default <code>maxlambda</code> = 16).
<code>minalpha</code>	Minimum value for alpha (default <code>minalpha</code> = 0).
<code>maxalpha</code>	Maximum value for alpha (default <code>maxalpha</code> = 1).
<code>folds</code>	Self specified folds for cross validation (mainly for reproducibility and comparability purposes).
<code>noisy</code>	indicates whether folds for k-fold cross-validation should be random for each iteration, leading to a noisy objective function (default <code>noisy</code> = FALSE).
<code>obj_type</code>	Objective type, one of "lasso", "ridge" or "elnet".
<code>verbose</code>	Toggle for a verbose output (default <code>verbose</code> = TRUE)
<code>...</code>	Currently ignored.

Value

See [Optimizer](#)'s optimize function which returns a `data.table::data.table`.

`plot.tramnet` *Plot "tramnet" objects*

Description

Plot "tramnet" objects

Usage

```
## S3 method for class 'tramnet'
plot(
  x,
  newdata = NULL,
  type = c("distribution", "survivor", "density", "logdensity", "hazard", "loghazard",
           "cumhazard", "quantile", "trafo"),
  q = NULL,
  prob = 1:(K - 1)/K,
  K = 50,
  col = rgb(0.1, 0.1, 0.1, 0.1),
  lty = 1,
  add = FALSE,
  ...
)
```

Arguments

<code>x</code>	Object of class "tramnet".
<code>newdata</code>	See plot.ctm .
<code>type</code>	See plot.ctm .
<code>q</code>	See plot.ctm .
<code>prob</code>	See plot.ctm .
<code>K</code>	See plot.ctm .
<code>col</code>	See plot.ctm .
<code>lty</code>	See plot.ctm .
<code>add</code>	See plot.ctm .
<code>...</code>	Additional arguments passed to plot.ctm .

<code>plot_path</code>	<i>Plot regularization paths</i>
------------------------	----------------------------------

Description

Plot regularization paths and optionally log-likelihood trajectories of objects of class "prof_alpha" and "prof_lambda". Coefficient names are automatically added to the plot.

Usage

```
plot_path(object, plot_logLik = FALSE, ...)
```

Arguments

- object Object of class "prof_alpha" or "prof_lambda".
- plot_logLik Whether logLik trajectory should be plotted (default `plot_logLik = FALSE`).
- ... Additional arguments to `plot`

Value

None.

Examples

```
if (require("survival") & require("penalized")) {
  data("nki70", package = "penalized")
  nki70$resp <- with(nki70, Surv(time, event))
  x <- scale(model.matrix(~ 0 + DIAPH3 + NUSAP1 + TSPYL5 + C20orf46, data = nki70))
  y <- Coxph(resp ~ 1, data = nki70, order = 10, log_first = TRUE)
  fit1 <- tramnet(y, x, lambda = 0, alpha = 1)
  pfl <- prof_lambda(fit1)
  plot_path(pfl)
  fit2 <- tramnet(y, x, lambda = 1, alpha = 1)
  pfa <- prof_alpha(fit2)
  plot_path(pfa)
}
```

prof_alpha*Profiling tuning parameters*

Description

Computes the regularization path of all coefficients for a single tuning, alpha, parameter over a sequence of values.

Usage

```
prof_alpha(model, min_alpha = 0, max_alpha = 1, nprof = 5, as.lm = FALSE)
```

Arguments

model	Object of class "tramnet".
min_alpha	Minimal value of alpha (default min_alpha = 0).
max_alpha	Maximal value of alpha (default max_alpha = 1).
nprof	Number of profiling steps (default nprof = 5).
as.lm	Return scaled coefficients for class "tramnet_Lm".

Value

Object of class "prof_alpha" which contains the regularization path of all coefficients and the log-likelihood over the mixing parameter alpha

Examples

```
if (require("survival") & require("penalized")) {
  data("nki70", package = "penalized")
  nki70$resp <- with(nki70, Surv(time, event))
  x <- scale(model.matrix(~ 0 + DIAPH3 + NUSAP1 + TSPYL5 + C20orf46, data = nki70))
  y <- Coxph(resp ~ 1, data = nki70, order = 10, log_first = TRUE)
  fit <- tramnet(y, x, lambda = 1, alpha = 1)
  pfa <- prof_alpha(fit)
  plot_path(pfa)
}
```

prof_lambda	<i>Profiling tuning parameters</i>
--------------------	------------------------------------

Description

Computes the regularization path of all coefficients for a single tuning parameter, lambda, over a sequence of values.

Usage

```
prof_lambda(model, min_lambda = 0, max_lambda = 15, nprof = 5, as.lm = FALSE)
```

Arguments

model	Object of class "tramnet".
min_lambda	Minimal value of lambda (default min_lambda = 0).
max_lambda	Maximal value of lambda (default max_lambda = 15).
nprof	Number of profiling steps (default nprof = 5).
as.lm	Return scaled coefficients for class "tramnet_Lm".

Value

Object of class "prof_lambda" which contains the regularization path of all coefficients and the log-likelihood over the penalty parameter lambda

Examples

```
if (require("survival") & require("penalized")) {
  data("nki70", package = "penalized")
  nki70$resp <- with(nki70, Surv(time, event))
  x <- scale(model.matrix(~ 0 + DIAPH3 + NUSAP1 + TSPYL5 + C20orf46, data = nki70))
  y <- Coxph(resp ~ 1, data = nki70, order = 10, log_first = TRUE)
  fit <- tramnet(y, x, lambda = 0, alpha = 1)
  pfl <- prof_lambda(fit)
  plot_path(pfl)
}
```

<i>tramnet</i>	<i>Regularized transformation models</i>
----------------	--

Description

Regularized transformation models

Usage

```
tramnet(model, ...)

## S3 method for class 'formula'
tramnet(
  model,
  data,
  lambda,
  alpha,
  tram_fun,
  tram_args = NULL,
  constraints = NULL,
  groups = NULL,
  ...
)

## S3 method for class 'tram'
tramnet(model, x, lambda, alpha, constraints = NULL, groups = NULL, ...)
```

Arguments

<code>model</code>	Either a "formula" specifying the regression or an object of class "tram".
<code>...</code>	Additional arguments passed to <code>solve</code> .
<code>data</code>	Object of class "data.frame" containing the variables referred to in the formula model.
<code>lambda</code>	A positive penalty parameter for the whole penalty function.
<code>alpha</code>	A mixing parameter (between zero and one) defining the fraction between lasso and ridge penalties, where <code>alpha</code> = 1 corresponds to a pure lasso and <code>alpha</code> = 0 to a pure ridge penalty.
<code>tram_fun</code>	Character referring to an implementation in package 'tram'. See BoxCoxNET for the implemented models.
<code>tram_args</code>	Additional arguments (besides <code>model</code> and <code>data</code>) passed to <code>tram_fun</code> .
<code>constraints</code>	An optional list containing a matrix of linear inequality contraints on the regression coefficients and a vector specifying the rhs of the inequality.
<code>groups</code>	For group lasso penalties, <code>groups</code> can be supplied as a vector of consecutive integers of the same length as columns in <code>x</code> .
<code>x</code>	A numeric matrix, where each row corresponds to the same row in the <code>data</code> argument used to fit <code>model</code> .

Details

Partially penalized and constrained transformation models, including Cox models and continuous outcome logistic regression. The methodology is described in the *tramnet* vignette accompanying this package.

Value

An object of class “*tramnet*” with `coef`, `logLik`, `summary`, `simulate`, `residuals` and `plot` methods

Examples

```
if (require("penalized") & require("survival")) {
  ## --- Comparison with penalized
  data("nki70", package = "penalized")
  nki70$resp <- with(nki70, Surv(time, event))
  x <- scale(model.matrix( ~ 0 + DIAPH3 + NUSAP1 + TSPYL5 + C20orf46,
                           data = nki70))
  fit <- penalized(response = resp, penalized = x, lambda1 = 1, lambda2 = 0,
                    standardize = FALSE, data = nki70)
  y <- Coxph(resp ~ 1, data = nki70, order = 10, log_first = TRUE)
  fit2 <- tramnet(y, x, lambda = 1, alpha = 1) ## L1 only
  coef(fit)
  coef(fit2)
}
```
